
Four Winds IT Website Rebrand

From big ideas to focus

We started with a lot of information

But the truth?

Our prospects want answers and they come to our website for it.

So we got to work

Choose one approach with the goal being to be consistent in our brand, impact and conversions

→ **Brand**

We are real smart people and we do IT better.

→ **Impact**

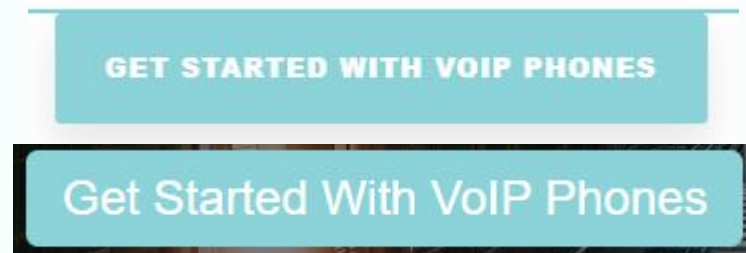

We grow businesses and keep them secure.

→ **Conversions**

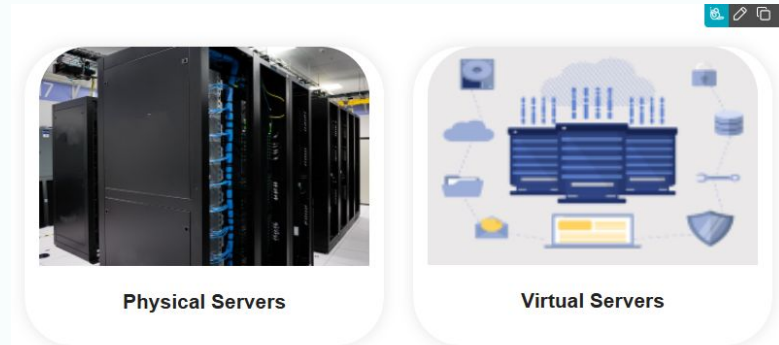

We make working easy. We are selling ease and growth.

Before changing our look we had to know what
worked and what didn't.

Inconsistent use of
button type

Inconsistent use of
images

Main Design Issues

Way to much text in
one place(lacks
focus)

Generic stock
photos that never
added only took
away.

Overall this made the
website looked
inconsistent.

Aligning Business and Technology

Lifecycle management helps to marry the long-term goals of your business with your technology by facilitating:

✓	Smarter Spending	Most businesses are reactionary when it comes to technology spending, allocating resources last minute in order to deal with unexpected failures. By proactively scheduling upgrades and maintenance your business can optimize time and budget, focusing on developing technology that will actually improve your processes as opposed to constantly putting out fires.
✓	Hardened Security	Outdated hardware and software pose a major security risk to your organization. Manufacturers stop releasing patches and updates for end of life products and these updates are crucial to remediating newly exploited security vulnerabilities for end of life products.
✓	Enhanced Agility	Implementation of new applications can be a nightmare but by organizing your technology and establishing standards, software can be quickly and seamlessly deployed across your network with minimal interruption to the workday.
✓	Regulatory Compliance	Industries governed by regulatory compliance (healthcare, education, etc.) require organizations to maintain certain standards when it comes to data security. A proper lifecycle management plan will help your organization meet security standards and avoid any potential violations.
✓	Improved Morale	It's important to equip your staff with the right tools so they can be effective and productive. If your team feels as though they are being held back by the technology they're provided it can be extremely frustrating. By setting performance standards you'll know when it's time to recycle or upgrade equipment so your team maintains peak performance.

Why it Matters

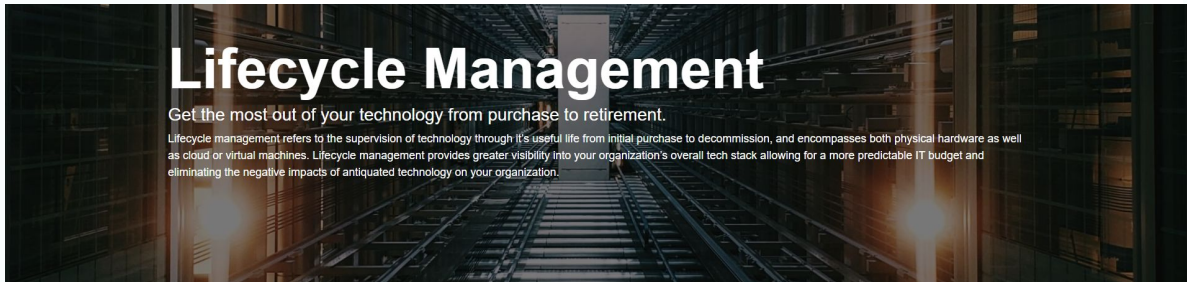

Maintaining your technology is no easy task. From employee workstations and network equipment to cloud applications and software, your network will only become more complex over time as you build out your tech stack. Lifecycle management provides a structured method of organizing and maintaining infrastructure to reduce downtime, optimize performance, and plan for capital expenditures.

Lifecycle Management

Get the most out of your technology from purchase to retirement.

Lifecycle management refers to the supervision of technology through it's useful life from initial purchase to decommission, and encompasses both physical hardware as well as cloud or virtual machines. Lifecycle management provides greater visibility into your organization's overall tech stack allowing for a more predictable IT budget and eliminating the negative impacts of antiquated technology on your organization.

The most impactful page on our website is our homepage... so we built the website on that to create consistency...so this how the iteration process looked like

Four winds IT is a technology service management firm. Where on boarding is simple (doing better shouldn't be hard), your bottom-line is our bottom-line, supporting a scaling business is our goal.

We love the last idea but...

Some ideas create bottleneck because we fell in love it with but made it too complicated so we went back to the basics KISS....(long term this would have worked but in a 4 month sprint with 1.5 people and several AI agents it was just not going to work.

Even bigger issue is that we as a team lacked focused. Set unrealistic goals and expectations. The goals and expectations were in line with a website revamp but **not** a brand & WEBSITE revamp.

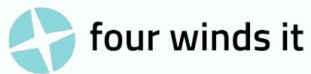

We needed to reset our goals

How did we do this?

Going back to the basics and focused on the website changes not the brand changes.

Basics (KISS)

- Clear messaging.
- Concise as we could be while hitting SEO and corporates needs and wants
- Easy. That's what I wanted our website to feel like. Like it was easy to understand and navigate.

The Four Winds IT Difference

Most business owners don't care how IT works. They care that it does.

You want peace of mind ,your team working better, without being interrupted. We want that for you.

We are available to answer any of your IT questions — just click the button below or call us at **941-315-2380**.

Demo

No long-term contracts. No markups. No mystery invoices. You pay for what you use. That's it. No bloated packages, no surprise fees, and no long-term commitments you'll regret later.

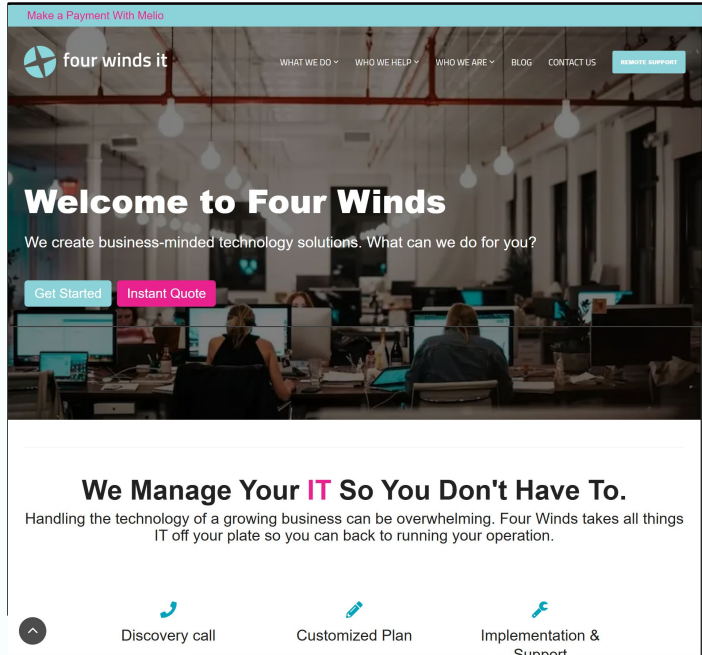

Support that feels like support. No auto attendants. No ticket purgatory. Just real people who know your setup and solve problems fast.

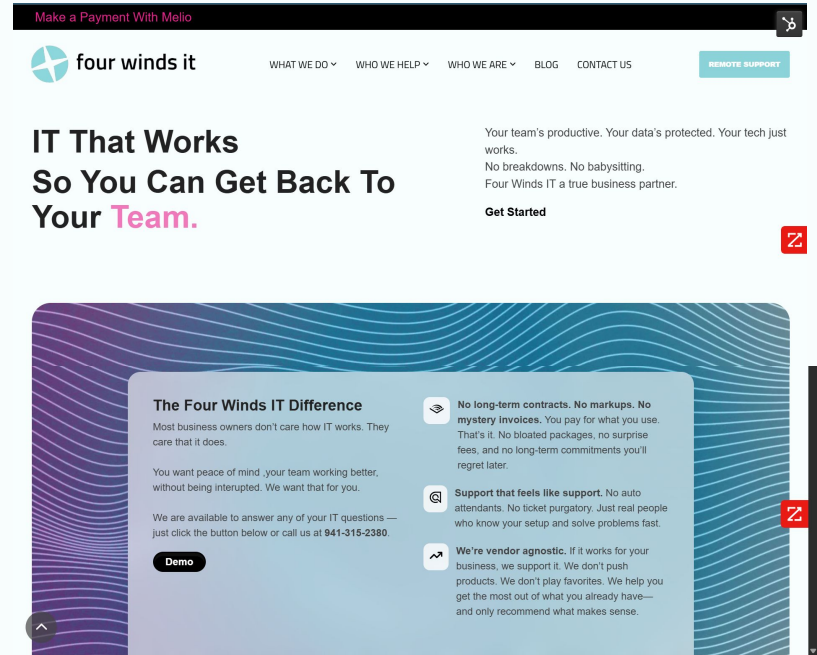

We're vendor agnostic. If it works for your business, we support it. We don't push products. We don't play favorites. We help you get the most out of what you already have—
